Granstand III®

Modular Standing System

Granstand III delivers individualized positioning, mild hip hyperextension when fully upright, and optimal weight-bearing support in a fully modular, growth-adjustable system. Our unique design requires **No Transfers** and **No Lifts**. Clients are safely brought from a seated to a standing position directly from a wheelchair, bed, or other surface—reducing caregiver strain, improving safety, and in some cases, eliminating the need for caregiver assistance.

With one of the most extensive systems of adjustable components available, **Granstand III** provides a precise, personalized fit that promotes proper alignment and natural standing posture. The result is comfortable, stable support that reduces pressure points, enhances positioning, and delivers effective contracture control while maximizing therapeutic benefit.

Modular Standing System

Designed to adapt to growth and changing conditions, the Modular System allows quick adjustments and component upgrades without replacing the frame. Convertible configurations reduce the need for multiple standing devices.

Full Weight Bearing in the Standing Position

When fully upright the GSIII provides the client with mild hip hyperextension for optimal positioning support, comfort and stability.

No Transfer Design

Our unique Sling and Lift Arm System stands the client directly from a seated position with minimal or no assistance necessary.

Space Saving Expandable Frame

Expandable base design accommodates a wide range of manual and power wheelchairs. At 27 1/2" wide, GSIII passes through standard doorways and minimizes space requirements. An optional 3" Wider Frame is also available.

Nichole at 42" in
Kidstand III

Mike at 6' tall in
Granstand III

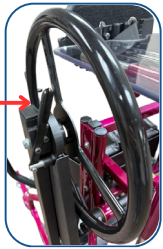

Standard Features include: Expandable Base with 3" Plastic Casters, Height and Depth Adjustable Body Pad, Height and Depth Adjustable Clear Tray Table, Width and Depth Adjustable Foot System, Pull-to-Place Seat Sling, Height and Depth Adjustable Knee System

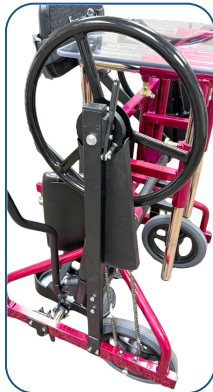

Granstand III[®] Mobile Kit

Provides independent mobility during standing for clients with sufficient upper body strength. A positive chain drive system delivers smooth, controlled maneuverability, enhancing independence while upright. With the Mobile Kit, the GSIII also functions as an independently operated lift and transfer device, enabling clients to move from one seated surface to another without assistance.

Conveniently located
Handrim Locks

Direct Positive Chain Drive from
handrims to lower drive wheels

Mobile Kit Requires a Mobile Foot System
and includes: Handrims, Handrim Locks, Steel
